SUMMARY

I am a creative problem solver that truly values the interactions between people more than anything else. I'm passionate about learning and growing as an individual, but just as importantly - a team member.

I occupy my time by learning as much as I can about different programming languages, and anything that really challenges myself to move past my comfort zone.

My lifelong goal is to build something that is between the intersection of computer science and humanities.

EXPERIENCE

Intern, FindTouch

Portland, Oregon— Mar 2016 - Current

I report to the senior developer and CTO daily to maintain my tasks on AngularJS as well as Sass. I'm constantly in communication with the testing team to make sure things are running smoothly.

Barista, Starbucks

Las Vegas, Nevada— Feb 2015 - Dec 2016

I made, served, and took orders for handcrafted beverages for nearly a year. I was responsible for making sure the customer was always satisfied, and left the store with a smile on their faces.

Technical/Customer Support, Polaroid Fotobar

Las Vegas, Nevada — Jan 2014 - April 2015

I helped customers troubleshoot our computers to navigate our AWS powered website. I also was in charge of printing photos on quality cardstock on high end Epson printers with an Esko cutting machine.

EDUCATION

Epicodus

Jan 2016- April 2016

I learned how to quickly absorb information, and implement those newly learned skills in real world applications. Pair programming was implemented in the course, so I've got very accustomed to working on a team setting.

College of Southern Nevada (English Major)

Aug 2013- Aug 2015

I spent two years developing my communication, and analytic skills through my studies of English literature. I wrote literary critiques of everything from poems to full scaled novels.
